Free app to remove unwanted objects from video

Prevent distracting background objects from stealing the focus of your audience doesn't always have time to resmrite footage when it's not going exactly as planned. Whether it's a person wandering in the background, or a distracting object interfering with your camera focus, video masks are a great tool to use to clean up your photos. You can use a video mask to cover and replace the area where the distraction occurs. Because video masks can be enabled to track the distracting object for you, using a video mask will minimize the manual adjustments required, saving valuable editing time. How to remove objects using a video mask here. we create the illusion that the beach is empty by hiding a young woman sitting in the sand from view. Select the clip you want to edit. Duplicate the clip on the timeline and drag the duplicated clip to an overlay track. You may need to resize the clip to fill the frame. Select the Overlay Track clip, and then click the Masking Button on the timeline toolbar. Draw a mask over the object you want to remove using the masking tool of your choice. You want to feather the mask to improve smoothing with the layer down. After softening and ordering, click Flip as we want everything except the area I chose to be visible. Usually it's easier than choosing everything but your subject in the first place. Click Detect Motion and mask the end of the clip to start creating the auto-mask, and follow the object in all frames. Download free trial 30 days now! Note the mask's progress. If it starts ignoring areas of the topic, click Cancel and return to the frame where the problem begins, correct the mask, and then click Motion Detection again and adjust a mask for the end of the clip. The program will restart the automatic masking process from the nod you made to the repair. After the pin looks good, click OK to return to the timeline. Move the original clip in the preview window so that the topic no longer appears through the mask. Click Project or click the timeline at any point during the clip to check the location of the clips to make sure the object is hidden. Play the clip to ensure everything looks smooth. Now that you've removed the distracting object from your photos, check with video masks to enhance the subject or add a creative title! Unfortunately, this application has no use whatsoever, for anyone, given that it crashes at any single, lonely time I try to remove the watermark logo from my video. I believe it should be fixed or removed from the app store. I thought Apple was filtering apps for developers? If so, why this application was allowed.
